GTEH Corporation

Scope of Work

Consultant-Software Customization to Web Based Retailer Training Tool

1. Description of Services:

The Consultant shall provide the following services for GTECH:

- Serve as Flash/ActionScript 3.0 programmer to develop 4 wager modules for the *Lottery Learning Link* project.
- Primary method of communication with team members will be conducted through face-to-face meetings and phone/email correspondence.
- Work will be done on-site at the GTECH Center, unless mutually agreed upon for a specified date and/or purpose.

2. Main responsibilities:

- Externalize code into Classes. Assign those Classes to the wager application through the Document Class and library symbol Class property. Create a Class outline to define the hierarchy of the classes and identify their responsibilities.
- Limit Class responsibilities to a few closely related concepts.
- Classes should communicate with each other through Events (preferred for child-parent communication) and Direct Calls (preferred for parent-child communication). Child-child communication must be avoided.

An LLLMain Document Class will control the overall functionality of the application. This class will receive the events from the following classes and dictate the required actions.

- Mode Choice: Control the display and selection of Mode. Will broadcast when there is a change in Mode.
- XML Data Store: Load any XML data required for the application. Will broadcast completion status and push data to its listeners.
- Media Player: Load and manage playback of any Video or Audio. Will broadcast Start and end of media and cue points.
- Hand/Feedback: Control movements of the "hand" for demonstration and binds "hand" as cursor. Displays/controls Feedback for correct or incorrect answers. Will broadcast when a demonstration is complete.
- Terminal Screens: Control the display all terminal screens, including buttons contained within. Will provide hand location by button name, highlight button by button name, and broadcast a button selection pushing the name of the button selected.

Terminal screens must be designed in a manner that reduces time to edit and time to adapt to a new jurisdiction. All number selection screens will be built dynamically according to the XML data source for that lesson.

The goal is to provide a wager "Package" that does not need to be changed for either a new lesson or a new jurisdiction. The Package remains unchanged for a new wager and/or jurisdiction where the XML data source(s) and terminal screen sequences are updated.

3. Deliverables:

The Consultant shall provide the following deliverables:

- All relevant files required for wager lesson, including, but not limited to:

The Texas Lottery has generated well over \$17 billion for the state of Texas since the first ticket was sold in 1992. Prior to 1997, the proceeds were allocated to the General Revenue Fund. Since 1997, all Texas Lottery proceeds have been transferred to the Foundation School Fund to support public education in our state. The Texas Lottery has contributed more than \$12 billion to the Foundation School Fund, and of that total, \$1 billion was contributed in fiscal year 2009. Other Texas Lottery funds such as unclaimed prizes revert back to the state for programs authorized by the Texas Legislature. Beginning fiscal year 2010, Texas Lottery proceeds will also benefit the Fund for Veterans Assistance.

The Lottery currently offers several draw games (Power Ball, Mega Millions, Texas Two Step, Pick 3, Daily 4, and Cash5) and Scratch offs. For more information about the games and the Lottery, please visit www.txlottery.org.
